Project

Project Name: CRM (Customer Relationship Management)

Sub Product Name: Online Broking, Franchise, OFA, Retail, IB, SME, Insurance, CF, etc.

Client: Anand Rathi Clients, Other Clients for OFA.

Front End Technology: ASP.NET 4.5 with C#, MVC, Angular JS, HTML, CSS

Development Tool: Microsoft Visual Studio 2013,2019

Project Description:

- *Customer Relationship Management Definition. Customer Relationship Management (CRM) is a strategy for a business to manage its interactions with its customers. A CRM system is an essential tool for business that helps you manage your customers, sales and marketing.*
- *CRM tools with marketing automation capabilities can automate repetitive tasks to enhance marketing efforts at different points in the lifecycle for lead generation. For example, as sales prospects come into the system, it might automatically send email marketing content, with the goal of turning a sales lead into a full-fledged customer.*
- *CRM systems help businesses optimize processes by streamlining mundane workloads, enabling employees to focus on creative and more high-level tasks.*
- *CRM systems help track employee information, such as contact information, performance reviews and benefits within a company. This enables the HR department to more effectively manage the internal workforce.*
